SUMMARY

I am a full-stack engineer with 5+ years of experience across software contracts and VC-funded startups, undertaking one-person roles in which served Fortune 500 clients and millions of users worldwide. I am seeking my next enterprise level responsibility to own world-class solutions.

RELEVANT WORK EXPERIENCE

- Fiverr.com** – *Freelance Full-Stack Software Developer* – Portland, OR Dec 2024 - Present
- Built legacy infrastructures, websites, and databases using React, Node, TypeScript, noSQL, Docker, Kubernetes, GCP, and AWS for 8+ clients around the globe, coordinating cloud native project services across SaaS, e-commerce, retail, and consumer industries
 - Supporting 4+ start-ups to The App Store, enriching brand complexions into mobilized experiences targeted to worldwide audience
 - Refined requirements, planned end-to-end product lifecycles, and executed feature releases operating Agile sprints and LLM calibere
- MexiKhana LLC.** – *Freelance Software Developer* – Portland, OR May 2024 - Nov 2024
- Developed a modern platform with React and TypeScript that increased monthly revenue by 20%
 - Produced digital assets and automated processes, reducing time-to-delivery by 80% and operational costs by 70%
 - Worked directly with CEO on rapid iterative operations for implementing a fullstack application from inception to production
- Veeve, Inc.** – *Freelance UX Application Engineer* – Austin, TX Aug 2023 - Jan 2024
- Solo crafting American giants (Kroger, Albertsons, Safeway) with first-of-kind touch screen design for pioneer Smart Cart shopping
 - Initiated technical strategy and blueprinting of an opportunity design system, aligning solution architecture with business objectives
 - Contributed to 9–11% revenue growth per basket and 60% repeat engagement through data-informed interface optimizations with additionally A-grade earned satisfaction scores surveyed across the supermarket clientbase
- Youfeed.IO** – *Freelance Web Developer and UI Designer* – Austin, TX Jul 2023 - Nov 2023
- Sole hire responsible for building total software and design systems to begin a mobile start-up for foodies
 - Arbitrating serverless distribution into a consistent and maintainable siteware structure using React, Bootstrap, and Python
 - Ensuring development of code and budget all, managing end-to-end aspects of business planning, finance, and software development
- Hewlett Packard Enterprise** – *IT Business Operations Consultant* – Seattle, WA April 2023 - June 2023
- Conducted system assessments to identify distribution inefficiencies, data gaps, and opportunities for scale
 - Proposed a modernization plan that aligned business requirements, GCP daily operations, and long-term market intelligence
- Quasistatics, Inc.** – *Independent Marketing Contractor* – Seattle, WA April 2022 - June 2022
- One of first hires for Ixana, a pioneer wearables computer vision start-up tasked with a greater scope of responsibility.
- Developed digital marketing campaigns as well as demos and closed-loop testing environments for initial product release
 - Converted client feedback into product enhancement requests, requiring transformation of business requirements into technical engineering requirements

PROJECTS

- GardenSpace** – *Open-Source Project: Capstone at The Information School* | [Github](#) Jan 2023 - June 2023
- Led application engineering and exceeded all full-stack contributions by 17K+ lines of code
 - Integrated complex API datasets into usable event platform interfaces, demonstrating strong technical judgment and systems thinking
 - Award winner at a Top Ten University, for The Information School Capstone Research Award in 2023
- OurFamily** – *Open-Source Project: Cloud Service Software Development* | [Github](#) Jan 2023 - March 2023
- Created a licensed cloud service provider utilizing RESTful API, useState, and useEffect instances
 - Automated unit testing with Jest achieving 100% coverage
 - Developed 22K+ lines of self-started, structured code as an acting Principal enabling smooth backend operations and aesthetics
- Node.JS** – *Open-Source Project: Architecture & Documentation* | [Github](#) March 2023 - June 2023
- Led documentation and internal breakdown of the Node.js system architecture for future educational and engineering use
 - Designed a high-level model to visualize codeline configuration, dependency flow, and client use across the system
- Synapttech** – *Open-Source Project: Software & Hardware Club* | www.synapttechuw.org Sept 2021 - May 2023
- Leader for programming and design teams for 2 pioneer application lifecycles
 - Teaching onboarding team members web service tools, including Grafana, Splunk, New Relic APM, Jupyter Notebook, and GitHub
 - Building an LLM model contingent on a brain-computer interface telemetry using Tensorflow and python

SKILLS & TOOLS

Programming Languages: Python, C#, TypeScript, JavaScript (ES6+), CSS3, HTML5, R, SQL/SQLite, YAML

Libraries/Frameworks: React.JS, .NET, Git, Next.JS, Node.JS, Jest, Vue.JS, Bootstrap, Firebase, Pandas, Statsmodels, Scikit-learn

Tools: Docker, Kubernetes, NPM, Babel, Webpack, GitHub, Vite, CLI, GraphQL, Microsoft Azure SQL, Excel, AWS, GCP, Postgres

EDUCATION

University of Washington Information School, Seattle, WA

Sept 2020 - June 2023

Bachelor of Science, Informatics

Awards: iSchool Capstone Research Award 2023, TCF-USA Award of Recognition 2022, Annual Dean's List 2022 - 2023

Certifications: Docker, Learn TypeScript, Learn Next, Learn Vue, AWS Certified Cloud Practitioner (curr. enrolled), Kubernetes, C#
